

Learning target DF4, version 1

Compute derivatives using the Product and Quotient Rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (product, quotient, sum and difference, etc.) you are using.

1. $g(x) = \frac{\ln(x)}{2x^2 + 6x - 3}$

2. $f(x) = (x^2 - 2x - 4) \cos(x)$

3. $h(t) = -\frac{3t^2 + 2t + 3}{t^3}$

Learning target DF4, version 2

Compute derivatives using the Product and Quotient Rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (product, quotient, sum and difference, etc.) you are using.

1. $h(w) = -\frac{\cos(w)}{6w^2 + 5w + 4}$

2. $g(w) = \frac{3w^2 + 5w - 1}{w^8}$

3. $f(w) = -(4w^2 + 6w + 1) \ln(w)$

Learning target DF4, version 3

Compute derivatives using the Product and Quotient Rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (product, quotient, sum and difference, etc.) you are using.

1. $g(w) = -\frac{2w^2 + 6w + 1}{w^{1/5}}$

2. $f(w) = -\frac{\sin(w)}{3w^2 - 3w + 4}$

3. $h(w) = -(2w^2 + 5w - 5)e^w$

Learning target DF4, version 4

Compute derivatives using the Product and Quotient Rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (product, quotient, sum and difference, etc.) you are using.

1. $f(x) = -(3x^2 - 6x + 2) \cos(x)$

2. $h(y) = \frac{3y^2 - 3y - 2}{\sin(y)}$

3. $g(w) = \frac{2w^2 - w + 4}{w^{1/6}}$
