

Learning target DF6, version 1

Compute derivatives of complicated functions using a combination of derivative rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (chain, product, quotient, sum and difference, etc.) you are using.

1. $g(x) = \sqrt{\cos(-2x^4 + 5)}$

2. $f(w) = \left(\frac{6w^6 - 1}{5w + 3} \right)^4$

3. $h(y) = (3y^2 + 7y)^4 \cdot y^{1/4}$

Learning target DF6, version 2

Compute derivatives of complicated functions using a combination of derivative rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (chain, product, quotient, sum and difference, etc.) you are using.

1. $f(w) = \left(\frac{5w^6 + 1}{6w^5 + 2} \right)^6$

2. $g(x) = (5x^5 - 2x^3)^6 \cdot \sqrt{x}$

3. $h(y) = \sqrt{\sin(-2y^4 + 4)}$

Learning target DF6, version 3

Compute derivatives of complicated functions using a combination of derivative rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (chain, product, quotient, sum and difference, etc.) you are using.

1. $f(t) = \sqrt{\cos(-t^4 - 6)}$

2. $h(x) = \left(\frac{5x^5 - 2}{3x^3 - 1} \right)^4$

3. $g(w) = (3w^3 + 2w^2)^3 \cdot w^{2/3}$

Learning target DF6, version 4

Compute derivatives of complicated functions using a combination of derivative rules.

Demonstrate and explain how to find the derivative of the following functions. Be sure to write down which derivative rules (chain, product, quotient, sum and difference, etc.) you are using.

1. $h(t) = \sqrt{\cos(-4t^3 - t)}$

2. $g(w) = (5w^3 + 7w^2)^3 \cdot \sqrt{w}$

3. $f(y) = \left(\frac{y^2 - 5}{3y^3 + 4} \right)^5$
